Shipping Container Pop-Up/Moveable Hospitals

A Viable Resource to Help Address America's Impending Shortage of Hospital Facilities

- Shipping containers can quickly, and cost effectively, be transformed into full service mobile hospitals and transported wherever needed.
- Because of their modular design and portability, shipping container hospitals can be expeditiously deployed on site at critical infrastructure facilities and from there relocated as needed to designated areas in and around major population centers.
- These units are stackable and scale-able – with the ability to customize in virtually limitless configurations/reconfigurations and scale options.
- Container Hospitals are self contained for maximum isolation when needed.
- Built-in segregation affords less exposure for medical personnel versus more traditional hospital building configurations.
- Container Hospitals are easily stored and re-usable for rapid deployment in the future.
- Each unit is a self-contained biosphere with dedicated AC/Heating ventilation and lighting.
- Units provide dual connectivity to power grid and/or mobile generator.
- Container Hospitals lend themselves to more effective/efficient cleaning/disinfection regimes.

Container Hospital Deployment Proposal - USA

- The Integrated & American Maritime companies have container production facilities located in key areas across the US: NY/NJ, Chicago, Texas, and Georgia. With a workforce numbering over 1500 strong, it would be our honor and privilege to 100% dedicate our people and resources to the mission of producing, on an expedited emergency basis, customized Container Hospitals for rapid deployment to hotspots across the nation as a supplement to help fill the expected need for significant ICU and other hospital bed space and treatment facilities over the next 3-6 months at least.
- Our organization has longstanding logistical arrangements with major port facilities nationwide that we would also propose to make available as temporary sites to house the proposed Container Hospitals. The goal would be to deploy these units at strategic such infrastructure facilities adjacent to major urban areas. Once in place and operational, patients could then move out of densely populated urban core areas – over to designated Container Hospitals at the ports.

Integrated Equipment

- Whether new or used, we proudly offer our storage container modification services for all shipping containers. Our expert team of skilled representatives is here to guide and assist through the entire process. Once our team learns the detailed application, they will go above and beyond to meet your exact needs, while making necessary suggestions and agreed to adjustments along the way.
- With our cargo container modifications, a container is more than just a big box. Windows and doors are some of our most popular modifications to begin turning a container into a store, office, or home. Adding ventilation, heating, air conditioning, insulation, interior furnishings, field office equipment, command post or dormitory requirements can be customized to provide the comfort of a permanent structure for a fraction of the cost!
- IES has extensive experience in storage container modifications and customization. Custom doors, windows and skylights, climate control, interior options, locks, shelving, painting, as well as many other specialty projects are all our specialties. If you can conceive it, we can transform the container to deliver.

US OFFICE LOCATIONS

New Jersey Office

1 Pennval Road
Woodbridge, NJ 07095
Office: (866) 437-2691

Savannah Office

487 Bourne Ave.
Garden City, GA 31408
E-mail: ksweeney@amsiic.com

Houston Location

910 Hwy 146 N
La Porte, Texas 77571

Military/Government Grade Shipping Containers

- Integrated has available a full range of new and used standard and modified ISO Shipping Containers (also referred to as Conex or Milvans) for use in this initiative.
- Containers vary from watertight, structurally sound storage units, to containers suitable for transport of munitions and other UN Hazard Class 1 (IMDG) explosives.
- IES utilizes inspectors qualified for sourcing/selecting container units suitable for Department of Defense materials shipments.
