

# Phased Allocation of COVID-19 Vaccines: State and Territorial Approaches

As of March 10, 2021

This table provides information on state and territorial plans for phased allocation of COVID-19 vaccines. As initial supply of COVID-19 vaccines is limited, Governors are focused on prioritizing certain high-risk populations for vaccine allocation through a transparent and equitable process. This table outlines state and territorial approaches according to Phases 1a-c, 2, and 3, however state Phases or Tiers may vary from this structure (e.g., additional phases or more condensed phasing) and such variations are noted where applicable for individual states.

State planning for allocation to critical populations across Phases, including guidance for providers and the public, will continue to evolve and this document will be updated to reflect additional details as they are released. For additional information on allocation of COVID-19 vaccines, including federal recommendations and considerations for states, please see NGA's [Allocating COVID-19 Vaccines In Initial Phases Of Distribution: Federal Recommendations And Considerations For States](#).

Given the robust and rapid nature of state efforts, the National Governors Association welcomes feedback on state actions that may be missing or have evolved since the release of this table. If there is information that should be added or amended, please contact Michelle LeBlanc [mleblanc@nga.org](mailto:mleblanc@nga.org) or Brittney Roy [broy@nga.org](mailto:broy@nga.org).

<a href="#"><u>Guam</u></a>	Phase “1a” includes health care personnel who have direct or indirect exposure to COVID-19 or infectious material and residents of long-term care facilities.	Phase “1b” includes “essential service workers” who have a “key role” in ensuring essential functions are running, but who have difficulty maintaining social distancing while on duty.  Based on CDC recommendations Public Health has <a href="#"><u>prioritized</u></a> vaccinating those 75 years and older  *On <a href="#"><u>Jan 25</u></a> , Guam approved vaccinations for licensed child care center workers in Phase 1b.	Phase “1c” includes those 60 and older and those diagnosed with high-risk medical conditions or who are predisposed to severe illness.  * On <a href="#"><u>Jan 25</u></a> , Guam expanded the Phase 1c category to begin vaccinating patients being discharged from hospitals who are diagnosed with at least one comorbidity, regardless of age.	Phase “2” includes those who were eligible for the first phase but who weren't vaccinated because of limited supply or because they allowed others to go first. It also includes essential workers, “underserved populations” and the general population.  *On <a href="#"><u>Mar. 9</u></a> , Guam expanded eligibility to residents 50 or older, starting Mar. 15.	Phase “3” is a continuation of Phase 2, with more opportunities for the general public to be vaccinated.
