The SAS Learning Loss Solution

Helping students recover a lost year of learning

The COVID-19 pandemic closed schools and caused countless disruptions to our K-12 classrooms. SAS' Learning Loss Solution analyzes data to help principals, teachers, and parents identify students who fell behind during the pandemic – and measure how much help students need to catch up in critical subjects like reading and math. It helps leaders assess learning at the state level and address it at the local level.

Assess Learning

SAS' approach to measuring Learning Loss is different – and better – than other consultancies as SAS has over 20 years of experience and a team of 55 dedicated experts focusing on this exact body of work. We have the capability to examine historical data, identify trends, and make future predictions based on:

- Grade and subject
- Instructional setting: virtual, in-person, or hybrid
- Technology access
- Socioeconomic status
- Gender
- Ethnicity

Provide Insights

SAS' Learning Loss Solution gives local decision-makers the data they need to create unique, strategies to address learning by:

- Repurposing and reallocating resources
- Targeting personalized instruction
- Prescribing solutions and interventions to improve student outcomes

Why SAS?

SAS is a global leader in data analytics and its education solutions have helped improve student outcomes in over 35 states across the U.S. The SAS Learning Loss Solution is one of many tools SAS offers for local, state and federal education agencies.
